Q3. what is the another word for row ? For column?

Ans :- Another word for row -> record, tuple.

Another word for column -> attribute, field.

Q4. Why isnt it possible to see the first five rows of a table?

Ans :- Because in MySQL or SQL which are the RDBMS (Relational Database Management Systems) stores the data in fragments not like DBMS's MS EXCEL which stores data in sequential manner which we can see first our data if we want to see first five rows but in MySQL we can't it maybe possible through gui or if we names columns a sequence.
